How did we do this project?

To run the project, you need to have **Visual Studio 2019** or more and **MS SQL Server Management Studio** and **HTML5**. When the master logged in using the credentials, you have the options to :

- insert student's details,
- update student's details,
- attendance marking option and
- payment updating.

The attendance can be marked if the student appears for a class. When the student makes a payment, his payment details can be saved. Also, we can check the reports of payment. All these are shown in the video that is being attached.

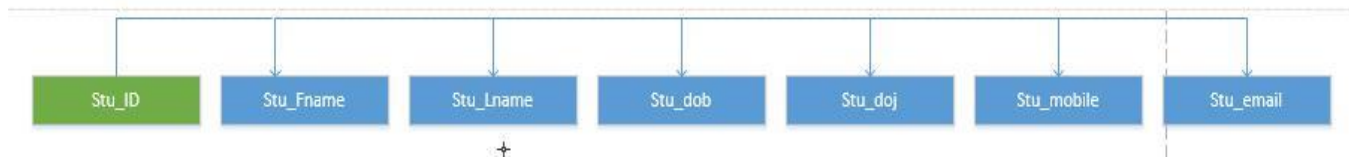

Username and Password?

To use this application, login is needed. The credentials are:

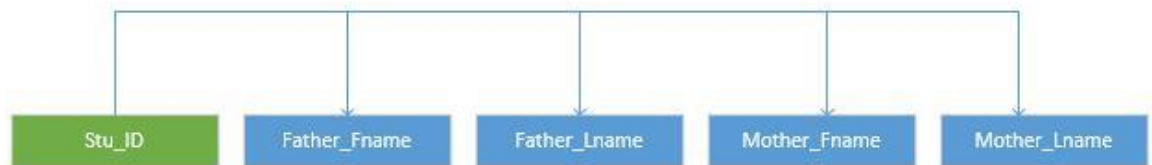

- ❖ Username: Master
- ❖ Password: Myschool
